Red Collar criminals is a group of white collar offenders that have high criminal capacity and social adaptability; but they have psychiatric disorders such as narcissism and antisocial personality. Although they initially commit financial and economic crimes, since they continue to face the risk of detecting and disclosing their crimes by close relating, business partners and employees, they are committing bloody crimes and killing them. Therefore, the issue of their crimes is the physical integrity and the lives of the people that protection is prioritized by prevention criminology with a focus on these offenders. Studies have shown that the effectiveness of a preventive strategy offender – oriented to the red collar potential criminals and adopting a preventive strategy victim – towards innocent people who are subject to murder. In this article, we it has been tried to investigate the types of prevention of bloody crimes of red collar criminals.

**Key words:** *Red Collar Criminals, Mental Disorder, Murder, Offender-Oriented Prevention, Victim – Oriented Prevention.*
